OCTOBER SPECIALS 2025

**NRM
 PECK N LAY
 20kg**

\$34.50

NRM Peck n Lay 20kg

A complete feed designed to provide the essential nutrients required to support egg production in laying hens. Peck n Lay is specifically formulated with quality ingredients, balanced amino acids, energy and calcium for good egg production and shell quality. Natural pigments from paprika and marigold are included to enhance yolk colour. Essential oils and organic acids aid in protecting against gut pathogens.

**NRM
 ALPACA PELLETS
 20kg**

\$35.60

NRM Alpaca Pellets 20kg

High energy pellets formulated from non-GMO ingredients designed specifically for alpacas and llamas. High specification pellets specifically enriched with essential vitamins to supplement pasture for alpacas and llamas that need to gain additional condition. This includes lactating animals, cria and poor performers that need supplementary feeding.

Popular spring crops to plant include: peas, beans, potatoes, carrots, cabbage, courgettes, broccoli, cauliflower, beetroot, leeks, and salad greens.

Potatoes— continue mounding, and add some more fertilizer as shoots grow, until they are approximately 300mm tall. This protects them from wind and frost, prevents light reaching tubers and turning them green, and encourages tuber development.

Labour weekend is traditional planting time for tomatoes and corn - get yours in for a bumper crop in summer!

Lay out snail bait to keep snails and slugs from eating your new and existing plants.

Grass Grub in lawns

Grass grubs are the larvae of tan coloured shiny beetles that lay their eggs in the soil during spring and summer. They are creamy white grubs with a brown head and a darker bottom.

When disturbed they curl into a C shape. They damage the lawn by eating the roots, just below the soil surface.

Symptoms of grass grub damage are yellowing patches in the lawn with grass being able to be lifted like a carpet.

The best time to start controlling grass grub is from mid-spring, which is when peak egg hatch begins and continues until early summer.

An application of Yates Insect Killer for Lawns or Neem Granules in October will control grass grubs and help minimise the damage they do.

Cover crops for your Garden

blended here at Kiwi Seed

Increase the beauty and biodiversity at your place.

Super summer will grow through spring and summer and can be terminated by being mulched or mown in summer. Super Summer is a high-diversity, spring-sown cover crop blend designed to enhance soil health, suppress weeds, and support beneficial wildlife during the warmer months. This mix includes peas, sunflowers, common vetch, forage barley, tillage radish, black oats, and buckwheat, each selected for their unique benefits:

Peas: Legumes that fix atmospheric nitrogen, enriching soil fertility.

Sunflowers: Deep-rooting plants that enhance soil aeration and provide habitat for pollinators.

Common Vetch: A legume that contributes to nitrogen fixation and improves soil structure.

Forage Barley: A cereal that adds organic matter and helps suppress weeds.

Tillage Radish: A deep-rooting brassica that breaks up compacted soil layers.

Black Oats: A cereal that provides ground cover and suppresses weeds.

Buckwheat: A fast-growing plant that attracts pollinators and suppresses weeds.

Readily available in store in 1kg packs.
